

# **T15**

**SELECTORS**

Maximum coin  
recognition  
efficiency

The Jofemar T15 model is the most practical, reliable and secure in the market for coin recognition. It incorporates state-of-the-art technology, such as double magnetic sensor, alloy and hardness sensors, and IR sensors that guarantee higher precision during the coin validation process.

**FEATURES**

- High-end selector, perfect for recreational machines with prizes and general vending machines.
- Standard 3.5" format with rejection and acceptance in the lower part of the selector.
- It has a double magnetic sensor in different stages to obtain all the alloy and magnetism data.
- The alloy and hardness sensors, and the three IR sensors that analyse diameter guarantee greater recognition precision.
- It has two important fraud-prevention measures, as the anti-thread at the selector's entrance and the coin output IR detection.
- A computer can programme the calibration, new coins, coin codes, operation modes, such as validator, totaliser (optional) or CCTalk.
- Coin grouping in groups that can be selected with micro-switches (example: Switzerland and Euro, or only Switzerland or only Euro).

**ACCESSORIES**

- Coin sorter with five ways with or without coin entrance channel.
- Front plate with recovery button and return drawer.
